

Dual-Chain Tokenomics

communiti will be the first cryptocurrency ecosystem of its kind with a technology we are calling **Dual-Chain Tokenomics**.

A portion of the TIPINU collected from the platform will be used to buy CUMINU from the open market. TIPINU has a 5% transaction tax, which will be collected whenever TIPINU is sent from one wallet to another; and a 10% platform fee, which will be collected whenever users on the platform tip for content.

The cross-chain burn mechanism of the CUMINU ecosystem will result in an Ever-decreasing total supply of CUMINU.

CUMINU's contract enables token burns to be **permanent**. This means that instead of sending tokens to a "dead wallet," every burn removes CUMINU tokens from the total supply directly and irreversibly. This will be reflected immediately on EtherScan.
